

SKILLSHEET

Using a formula to find the area of a common shape

The area of many plane figures can be found by using a formula. The table below shows the formula for the area of some common shapes.

Shape	Formula
1. Square 	$A = l^2$, where l is a side length
2. Rectangle 	$A = l \times w$, where l is the length and w is the width
3. Triangle 	$A = \frac{1}{2} \times b \times h$, where b is the base length and h is the height
4. Trapezium 	$A = \frac{1}{2}(a + b) \times h$, where a and b are the lengths of the parallel sides and h is the height
5. Circle 	$A = \pi r^2$, where r is the radius
6. Parallelogram 	$A = b \times h$, where b is the base length and h is the height

WORKED EXAMPLE

Find the area of each of the following plane figures.

THINK

- a**
- The shown shape is a triangle. Write the formula for the area of a triangle.
 - Identify the values of the pronumerals.
 - Substitute the values of b and h into the formula and evaluate.
- b**
- The shown shape is a trapezium. Write the formula for the area of this shape.
 - Identify the values of the pronumerals.
 - Substitute the values of the pronumerals into the formula and evaluate.
- c**
- The shown shape is a circle. Write the appropriate area formula.
 - Identify the value of r .
 - Substitute the values of π and r into the formula and evaluate.

WRITE

a $A = \frac{1}{2} \times b \times h$
 $b = 4, h = 6$
 $A = \frac{1}{2} \times 4 \times 6$
 $= 12 \text{ cm}^2$

b $A = \frac{1}{2}(a + b) \times h$
 $a = 6, b = 10, h = 4$
 $A = \frac{1}{2}(6 + 10) \times 4$
 $= \frac{1}{2} \times 16 \times 4$
 $= 32 \text{ mm}^2$

c $A = \pi r^2$
 $r = 7$
 $A = \pi \times (7)^2$
 $= \pi \times 49$
 $= 153.94 \text{ cm}^2$
 (to 2 decimal places)

Try these

Find the area of each of the following plane figures.

$A = l^2$
 $= 6^2$
 $= \dots\dots\dots$

$A = l \times w$
 $= \dots\dots\dots$
 $= \dots\dots\dots$
